

Rainier Fiber™ Wood Fiber Mulch

Rainier Fiber™ is 100% virgin wood fiber mulch for use in hydraulic planting and erosion control. It is premium quality wood mulch manufactured under constant quality control checks. The fiber is consistent in size and texture for the most optimum performance.

When applied over the soil surface, the fibers tend to twist and lock with each other as they dry. This forms a protective mulch mat to aid in erosion control, hold seeds in place, and provide a micro-climate to aid seed germination. After the seedlings have grown to sufficient size they, along with the mulch, will protect the soil surface to greatly reduce erosion and soil loss. In the final stages the fibers decompose, adding organic matter to the soil.

Rainier Fiber™ is fast to load in hydroseeding equipment from easy to handle plastic bags. Fibers are sized for maximum loading in a tank, and they make a homogeneous slurry of water, seed and fertilizer. The fibers remain in suspension during agitation and pumping, and the slurry does not dewater when doing hose work.

The green color makes the mixed slurry visible during application, even at maximum pumping distances. This allows the operator to apply an even application of material over the soil surface. The green dye added to the fiber during manufacture is non-toxic to aquatic, fish or animal life.

PRODUCT FEATURES

- Made from fresh cut, clean, western softwood chips.
- Fiber stays in uniform suspension and blends with seed and fertilizer.
- High loading and goes into slurry quickly; pumps easy in hydromulching machines.
- Forms stable mulching mat and holds the seed in place.
- Provides favorable micro-climate for faster germination.
- Helps establish grasses for erosion control, as well as fine turf.
- No viable noxious or other weed and plant seeds in the mulch. All seeds are sterilized.
- Fibers decompose after plants have established

APPLICATION

Recommended Rates:

1,800 pounds per acre on flat to 4H:1V slopes

3H:1V slopes use a heavier application
