Premier Super Tackifier

Ultra High Grade Acrylamide Copolymer

Description:

Ultra High Grade, Anionic, Acrylamide Copolymer in the form of a free flowing coarse white powder

Principle Use and Purpose:

Polyacrylamides (PAMs) are polymer-based materials used to facilitate erosion control and decrease soil sealing by binding soil particles.

Advantages:

- Promotes flocculation (reduces settling time) of smallest particles
- Increases soil pore volume and permeability, thus decreasing imperious cover
- Less obtrusive than some conventional measures – doesn't interfere with construction machinery/activity
- Convenient and easy to apply and store along with other soil amendments (fertilizer, mulch, etc.) with conventional seeding, mulching, or irrigation equipment
- Reduces seed, pesticide, and fertilizer losses that hinder vegetation establishment on site
- Excellent for winter
- Product does not freeze in container
- Ultra High Grade means less product required
- Environmentally friendly

Mixing:

Application rate is 3 Lb. per Acre. Add a small amount of **Premier Super Tackifier** to water in the mixing tank. Sprinkle slowly into turbulent water when mixer is on high. Mix for 3 - 5 minutes

Packaging:

Premier Super Tackifier is available in 3 and 6 Lb. jugs, as well as 5 gallon high impact pails with a snap-on lid.
